Project Proposal (Proposed Solution) report

The proposal describes an AI-assisted web workflow that turns a short story or idea into a structured multi-panel comic with generated dialogue and visuals, preview and PDF export.

Project Overview	
Objective	Simplify comic creation by turning a short story or idea into a structured multi-panel comic with generated dialogue and visuals.
Scope	Provide a web interface for story prompts and character/settings details, AI generation, panel preview, and final comic PDF export.
Problem Statement	
Description	Manual comic creation requires writing, scene planning, drawing/image generation, dialogue placement and layout, which are time-consuming and difficult without design skills.
Impact	An AI-assisted workflow reduces separate manual steps by generating story content, dialogue and comic panels from user input.
Proposed Solution	
Approach	User enters a story/prompt and character or setting details; the application generates story/dialogue and visual panels, previews them, and supports PDF export.
Key Features	- Story/prompt-based generation - Character, setting, tone and art-style inputs - AI-generated story/outline/dialogue - AI-generated comic images/panels - Multi-panel preview - PDF export/download

	- Simple web-based workflow - Generated comic result page with PDF download

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications	[Information Required]
Memory	RAM specifications	[Information Required]
Storage	Storage for application/data	[Information Required]
Software		
Frameworks	Python web framework/server	FastAPI / Uvicorn
Libraries	AI and image-generation services	Jinja2, Gemini AI services, image-generation pipeline
Development Environment	IDE / development environment	VS Code / local development
Data		
Data	Data source / size / format	[Information Required]
