

Performance Testing

Date	30 September 2026
Team ID	6ab3ecd3a238dc999eb3fcc2
Project Name	ComicCraft AI
Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	[Information Required]
Type of Testing	[Information Required]
Target Module / API	Comic generation workflow (routes.py)
Test Environment	Local deployment with Uvicorn
Test Date	30 September 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Single-user comic generation request	[Information Required]	[Information Required]	Comic generation completes and preview is returned.
2	Concurrent comic generation requests	[Information Required]	[Information Required]	Requests are handled without errors or timeouts.
3	Repeated generation with different prompts	[Information Required]	[Information Required]	Each request returns a distinct comic output.
4	Comic PDF export after generation	[Information Required]	[Information Required]	Generated comic is exported successfully as PDF.

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	[Information Required]	[Information Required]	Record measured average response time.
2	Response Time (Max)	< 5 seconds	[Information Required]	[Information Required]	Record measured maximum response time.
3	Throughput (Req/sec)		[Information Required]	[Information Required]	Record measured requests per second.
4	Error Rate	< 1%	[Information Required]	[Information Required]	Record measured error percentage.
5	CPU Utilization	< 80%	[Information Required]	[Information Required]	Record measured CPU usage.
6	Memory Utilization	< 80%	[Information Required]	[Information Required]	Record measured memory usage.

Step 4: Observations & Analysis

Key Findings:

No measured performance results are provided in the available project files.

Bottlenecks Identified:

Potential bottleneck: AI generation using Gemini and Stable Diffusion.

Optimization Steps Taken:

Retry/error handling and generated-image response validation are documented in the implementation.

Step 5: Screenshots / Evidence

Attach screenshots of your performance testing tool results below (e.g., JMeter report, Locust graphs, k6 output):
