Team ID	6ab3ecd3a238dc999eb3fcc2
Project Name	ComicCraft AI
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	Yes
8	Dockerfile / Containerization config (if applicable)	Yes
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
ComicCraftAi/
|-- app/
|   |-- main.py
|   |-- routes.py
|   |-- ai/
|       |-- gemini_flash.py
|       |-- services/
|           |-- init.py
|           |-- image_generator.py
|-- templates/
|-- requirements.txt
|-- .gitignore
generated/ is created at runtime for comic assets.
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://github.com/mvishal6002-maker/ComicCraftAi
Login Credentials (Demo)	Not required — no login is required for the application.
Platform / Hosting Provider	GitHub repository; local FastAPI + Uvicorn application
Repository Link	https://github.com/mvishal6002-maker/ComicCraftAi
Demo Video Link	https://drive.google.com/drive/folders/1NDLCLiYRRdQ1kjjxbd1fUFZ3-hLjxxTX

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:
 Python 3.x, pip, and a terminal. Configure GEMINI_API_KEY and POLLINATIONS_API_KEY in a local .env file.

Step 1: Clone/download the repository and open the project folder.

Step 2: Create and activate a Python virtual environment.

Step 3: Install dependencies: `pip install -r requirements.txt`

Step 4: Create .env and add the required API keys.

Step 5: Start the app: `uvicorn app.main:app --reload`

Step 6: Open `http://127.0.0.1:8000` in a browser.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Gemini API quota/rate limits may interrupt generation.	Check API quota and retry; fallback handling is implemented.
2	Image generation depends on provider availability and API key.	Configure POLLINATIONS_API_KEY and retry if unavailable.
3	Generated assets are stored locally; panel generation is sequential.	Use the generated/ output; future scaling can add storage/job queueing.
